

## Cubicles

### WC FULL CUBICLE

A WC cubicle combines the showering and toilet facility in one. This type of shower cubicle is the simple option when a showering solution is required with the minimum amount of installation and disruption to existing services. A cubicle can be located up or down stairs, and as full cubicles required no tiling, they can easily be relocated if required.

The addition of grabrails, shower seat or a wash hand basin will provide a functional solution for individual requirements.

Adjustable WC frame allows the wall hung toilet to be set at a specific height, to suit almost any user. Adjustable height WC frame dismisses the need for unpopular raised toilet seats or plinths. WC cupboard width of 350mm allows for cistern access. Toilet cistern and frame are screened out of sight by a full height removable glazed panel.

### FULL CUBICLE CDS1

A shower cubicle is the simple option when a showering solution is required with the minimum amount of installation and disruption to existing services.

A cubicle can be located up or down stairs, and as full cubicles required no tiling, they can easily be relocated if required.

The addition of grabrails, shower seat or a wash hand basin will provide a functional solution for individual requirements.
